Each of these components includes several principles and points of focus designed and implemented to achieve the objectives of the Internal Control System.

#### **Control Environment**

The Control Environment is a set of standards, processes, and structures that provide the foundation for the implementation of internal control within the organization. The Board of Commissioners and Board of Directors create a system at the highest level of the organization (*tone of the top*) regarding the importance of internal control and expected standards of behavior. The principles and points of focus of the control environment are as follows:

1. Upholding integrity and ethical values.
2. The Board of Commissioners shows its independence towards management and carries out supervision over the development of internal control performance.

3. Dengan pengawasan dari Komisaris, Manajemen membentuk struktur, jalur pelaporan dan kewenangan, serta tanggung jawab yang sesuai dalam upaya pencapaian tujuan organisasi.
4. Organisasi menunjukkan adanya komitmen untuk memperoleh, mengembangkan dan mempertahankan individu yang kompeten dalam upaya pencapaian tujuan organisasi.

### Risk Assessment

Risk is the possibility that a certain thing will happen and have a detrimental impact on achieving the Company's objectives. The risks faced by an organization can be internal (originating from within) or external (originating from outside). ### Monitoring Pelaksanaan Mitigasi Risiko Utama RKAP 2024

Sebagai bagian dari upaya pemantauan efektivitas pengelolaan risiko, perusahaan melakukan evaluasi terhadap tingkat risiko residual aktual (realisasi) dibandingkan dengan target risiko residual yang telah ditetapkan untuk periode Tahun 2024. Evaluasi ini bertujuan untuk mengetahui sejauh mana upaya mitigasi yang telah dilakukan berhasil menurunkan tingkat risiko sesuai dengan sasaran yang diharapkan, serta mengidentifikasi adanya deviasi yang memerlukan perhatian dan tindak lanjut lebih lanjut. Penilaian dilakukan berdasarkan dua parameter utama, yaitu dampak (impact) dan probabilitas (likelihood) dari masing-masing peristiwa risiko. Kedua parameter tersebut kemudian digunakan untuk menghitung skala risiko residual total, baik dari sisi skoring maupun nilai finansialnya dalam bentuk eksposur risiko. Dengan melakukan perbandingan antara realisasi dan target ini, perusahaan dapat secara objektif menilai efektivitas tindakan mitigasi yang telah diimplementasikan serta merumuskan strategi penguatan ke depan apabila diperlukan. Data kuantitatif dan kualitatif yang digunakan dalam evaluasi ini juga menjadi dasar dalam menyusun rekomendasi untuk peningkatan proses pengendalian risiko di periode selanjutnya.

Adapun rincian perbandingan realisasi dan target risiko residual untuk periode tahun 2024 disajikan dalam tabel berikut:

### Monitoring Implementation of 2023 RKAP Main Risk Mitigation

As part of the effort to monitor the effectiveness of risk management, the company evaluates the actual residual risk level (realization) compared to the residual risk target that has been set for the 2024 period. This evaluation aims to determine the extent to which the mitigation efforts that have been carried out have succeeded in reducing the risk level in accordance with the expected targets, as well as identifying deviations that require further attention and follow-up. The assessment is carried out based on two main parameters, namely the impact and probability of each risk event. These two parameters are then used to calculate the total residual risk scale, both in terms of scoring and its financial value in the form of risk exposure. By comparing the realization and target, the company can objectively assess the effectiveness of the mitigation actions that have been implemented and formulate future strengthening strategies if necessary. The quantitative and qualitative data used in this evaluation also form the basis for compiling recommendations for improving the risk control process in the following period.

The details of the comparison of realization and residual risk targets for the 2024 period are presented in the following table:

| No | Peristiwa Risiko / Risk Event                                                                                                                                                                                                                                               | Skala Risiko Residual Tahun 2024 /<br>Residual Risk Scale in 2024 |      |                               |      |                                             |      | Nilai Risiko Residual<br>Tahun 2024 / Residual Risk Value<br>In 2024 |       |                                       |      | Exposure Risiko<br>Tahun 2024<br>(Miliar) / Risk<br>Exposure in<br>2024 (billion) |      |

#### Penilaian Efektivitas Perlakuan Risiko Tahun 2024

Penilaian efektivitas perlakuan risiko dilakukan untuk mengevaluasi sejauh mana tindakan mitigasi yang telah dilaksanakan mampu menurunkan tingkat eksposur risiko sesuai dengan target yang telah ditetapkan. Evaluasi ini mencakup perbandingan antara eksposur risiko yang ditargetkan dengan realisasi aktual (*actual exposure*) selama tahun 2024.

Parameter yang digunakan dalam penilaian mencakup nilai eksposur risiko (dalam satuan miliar rupiah), baik sebelum maupun sesudah tindakan mitigasi, serta kesesuaian terhadap hasil yang diharapkan. Efektivitas mitigasi kemudian dikategorikan ke dalam beberapa kriteria, seperti "Efektif", "Cukup Efektif", atau "Tidak Efektif", berdasarkan perbandingan tersebut. Penilaian ini tidak hanya menjadi alat

#### Risk Treatment Effectiveness Assessment in 2024

The assessment of risk treatment effectiveness is carried out to evaluate the extent to which the mitigation actions that have been implemented are able to reduce the level of risk exposure in accordance with the targets that have been set. This evaluation includes a comparison between the targeted risk exposure and the actual realization during 2024.

The parameters used in the assessment include the risk exposure value (in billions of rupiah), both before and after the mitigation action, as well as the suitability of the expected results. Mitigation effectiveness is then categorized into several criteria, such as "Effective", "Quite Effective", or "Ineffective", based on this comparison. This assessment is not only a measuring tool for the success of

ukur keberhasilan penanganan risiko, tetapi juga menjadi dasar untuk melakukan penyesuaian strategi pengelolaan risiko ke depan, termasuk perbaikan pada desain mitigasi atau penguatan implementasi di lapangan.

Rekapitulasi hasil penilaian efektivitas perlakuan risiko sampai dengan akhir Tahun 2024 disajikan dalam tabel berikut:

risk management, but also a basis for making adjustments to future risk management strategies, including improvements to mitigation design or strengthening implementation in the field.

A recapitulation of the results of the risk treatment effectiveness assessment until the end of 2024 is presented in the following table:

## TOPIK MATERIAL

### Proses Penentuan Topik Material [GRI 3-1]

KAI memahami kegiatan operasionalnya dapat menimbulkan dampak bagi lingkungan dan masyarakat. Secara signifikan, industri kereta api dapat meningkatkan konektivitas, peningkatan mobilitas, pertumbuhan ekonomi lokal, dan berkurangnya polusi udara. Namun di sisi lain, industri kereta api dapat memunculkan dampak terhadap masalah lingkungan dan sosial, seperti pelepasan emisi gas rumah kaca dan potensi konflik dengan masyarakat setempat.

Atas dasar pemahaman tersebut, Perseroan mengidentifikasi dan memprioritaskan isu-isu yang paling signifikan terkait dengan dampak perusahaan terhadap lingkungan, sosial, dan ekonomi. Pada tanggal 5-19 Februari 2024 KAI melakukan pengkajian terhadap topik material agar sesuai dengan perkembangan bisnis Perseroan. Penentuan topik material yang dilakukan dengan melibatkan penanggung jawab penyusunan Laporan Berkelanjutan yang bekerjasama dengan tim penyusun (eksternal), serta melibatkan sejumlah divisi.

Merujuk pada pedoman GRI Standar 2021, KAI melakukan empat langkah penentuan topik material sebagai berikut:

#### 1. Memahami Konteks Keberlanjutan KAI

Pada 15-19 Februari 2024, PT Kereta Api Indonesia (KAI) menyelenggarakan Focus Group Discussion (FGD) sebagai bagian dari upaya strategis untuk mengidentifikasi dimensi-dimensi keberlanjutan yang mencakup aktivitas operasional, hubungan bisnis, keterlibatan pemangku kepentingan, serta konteks keberlanjutan dari seluruh entitas anak perusahaan, termasuk pihak dengan kepentingan minoritas. Kegiatan ini melibatkan partisipasi berbagai divisi terkait, antara lain Divisi Komunikasi, Sumber Daya Manusia, Hubungan Investor, Hukum dan Kepatuhan, Pemasaran dan Penjualan, Pengadaan, serta Pengembangan Produk.

#### 2. Mengidentifikasi Dampak Aktual dan Potensial

Dalam tahap ini, KAI berupaya melakukan identifikasi atas dampak-dampak yang telah terjadi (aktual), baik yang bersifat positif maupun negative, serta dampak-dampak potensial yang mungkin muncul dalam jangka pendek, menengah, maupun Panjang. KAI juga melakukan pemetaan terhadap dampak yang diharapkan dan tidak, serta dampak yang dapat dipulihkan dan tidak. Proses identifikasi ini dilaksanakan melalui pengumpulan perspektif dari berbagai pemangku kepentingan, termasuk masukan dari pihak konsultan dan akademisi, yang dihimpun melalui survei dalam bentuk kuesioner.

## MATERIAL TOPICS

### Determining Content and Material Topics [GRI 3-1]

KAI recognizes that its operational activities may have environmental and social impacts. Significantly, the railway industry can enhance connectivity, improve mobility, drive local economic growth, and reduce air pollution. However, it may also generate environmental and social challenges, such as greenhouse gas emissions and potential conflicts with local communities.

Based on this understanding, the Company identifies and prioritizes the most significant issues related to its environmental, social, and economic impacts. From February 5-19, 2024, KAI analyzed its material topics to align with the Company's business developments. The materiality assessment was conducted in collaboration with the team responsible for preparing the Sustainability Report (including external contributors) and involved multiple divisions.

In accordance with the GRI Standards 2021 guidelines, KAI carried out a four-step materiality determination process as follows:

#### 1. Understanding KAI's Sustainability Context

From February 15 to 19, 2024, PT Kereta Api Indonesia (KAI) organized a Focus Group Discussion (FGD) as part of its strategic efforts to identify sustainability dimensions, including operational activities, business relationships, stakeholder engagement, and the sustainability context across all subsidiary entities, including minority interests. This initiative involved the participation of various relevant divisions, such as the Communications Division, Human Resources, Investor Relations, Legal and Compliance, Marketing and Sales, Procurement, and Product Development.

#### 2. Identifying Actual and Potential Impacts

During this phase, KAI worked to identify both actual impacts (whether positive or negative) and potential impacts that may arise in the short, medium, or long term. The Company also mapped out expected versus unexpected impacts, as well as reversible versus irreversible ones. This identification process was conducted by gathering perspectives from multiple stakeholders, including input from consultants and academics, collected through questionnaire-based surveys.

Seluruh dampak yang diidentifikasi mengacu pada ketentuan dalam Standar GRI 2021 Konsolidasi, dan Peraturan Otoritas Jasa Keuangan Nomor 51/POJK.03/2017 tahun 2017 tentang Penerapan Keuangan Berkelanjutan bagi Lembaga Jasa Keuangan, Emiten, dan Perusahaan Publik. Dampak aktual dan potensial (topik material) yang berhasil diidentifikasi sebanyak 16 material, meliputi:

All identified impacts align with the provisions of the GRI 2021 Consolidated Standards and Financial Services Authority Regulation No. 51/POJK.03/2017 on the Implementation of Sustainable Finance for Financial Institutions, Issuers, and Public Companies. A total of 16 material actual and potential impacts were identified, covering:

### 3. Menilai Signifikansi Dampak

Berdasarkan hasil identifikasi topik material, KAI melanjutkan proses dengan melakukan penilaian terhadap tingkat signifikansi dampak dari masing-masing topik, bekerja sama dengan konsultan dan kalangan akademisi. Penilaian terhadap dampak negatif dilakukan dengan mempertimbangkan tingkat keparahan yang mencakup skala, ruang lingkup, serta konsekuensi yang bersifat tidak dapat dipulihkan, disertai dengan analisis terhadap kemungkinan terjadinya dampak tersebut di masa mendatang. Selain itu, signifikansi dampak negatif juga dianalisis berdasarkan potensi pelanggaran terhadap Hak Asasi Manusia (HAM). Sementara itu, penilaian signifikansi untuk dampak positif dilakukan dengan memperhatikan skala dan cakupan pengaruh, serta kemungkinan terjadinya dampak tersebut dalam periode tertentu.

Proses penilaian ini dilaksanakan melalui penyebaran kuesioner kepada para pemangku kepentingan, baik dari lingkungan internal Perusahaan maupun eksternal. Hasil dari tahap ini adalah asesmen signifikansi dampak yang dirumuskan sebagai berikut:

### 3. Assessing Impact Significance

Based on the material topics identification results, KAI proceeded to evaluate the significance level of each impact in collaboration with consultants and academic experts. For negative impacts, the assessment considered severity levels encompassing scale, scope, and irremediable consequences, along with an analysis of the likelihood of future occurrence. Additionally, the significance of negative impacts was evaluated based on potential human rights violations. For positive impacts, significance assessment examined the scale and breadth of influence, as well as the probability of these impacts materializing within a specific timeframe.

This evaluation process was conducted through stakeholder questionnaires distributed to both internal and external parties. The outcome of this stage was an impact significance assessment formulated as follows:

Meningkatkan Konektivitas Mengkatalisasi Transformasi Berkelanjutan bagi Negeri  
Enhancing Connectivity, Catalyzing Sustainable Transformation for The Nation

Pengelolaan risiko atas penerapan keuangan berkelanjutan dijalankan dengan berfokus pada aspek ekonomi, lingkungan, dan sosial. Pada aspek ekonomi, KAI melakukan pengelolaan risiko investasi/non investasi dan risiko operasional melalui upaya mitigasi dengan monitoring risiko secara berkala, baik yang dilakukan secara manual maupun melalui penggunaan sistem informasi manajemen risiko yaitu aplikasi SMARTKA. Pada aspek lingkungan, KAI melakukan upaya-upaya mitigasi dengan menyusun desain perencanaan/ kebijakan (proyek, investasi, proses bisnis, risiko terkait hukum dan sebagainya) antara lain dengan memberikan pengembangan wawasan kepada *risk owner* dalam melakukan pengelolaan risiko lingkungan. Sementara pada aspek sosial, khususnya terkait risiko keselamatan, KAI menerapkan manajemen risiko keselamatan di daerah dan pengembangan HIRADC (*Hazard Identification Risk Assessment and Determining Control*) melalui implementasi IBPR (Identifikasi Bahaya, Penilaian dan Pengendalian Risiko) menggunakan aplikasi yang terintegrasi dengan sistem informasi manajemen risiko (Aplikasi SMARTKA).

Risk management for sustainable finance implementation focuses on economic, environmental, and social aspects. On economic aspect, KAI manages investment/non-investment and operational risks through mitigation efforts with regular risk monitoring, conducted both manually and through the SMARTKA risk management information system application. On environmental aspect, KAI implements mitigation efforts by developing planning/ policy designs (projects, investments, business processes, legal risks, etc.), including providing insight development to risk owners in managing environmental risks. On social aspect, particularly regarding safety risks, KAI implements safety risk management in operational areas and develops HIRADC (Hazard Identification Risk Assessment and Determining Control) through the implementation of IBPR (Hazard Identification, Assessment and Risk Control) using applications integrated with the risk management information system (SMARTKA Application).

### Identifikasi Risiko Terkait Iklim [GRI 201-2]

Untuk mengatasi risiko perubahan terkait iklim, KAI secara berkala melakukan identifikasi terhadap bahaya, penilaian, dan pengendalian risiko akibat perubahan iklim. Berdasarkan laporan evaluasi kinerja tahun 2024, terdapat 88 kejadian gangguan perjalanan kereta api yang diakibatkan oleh kejadian alam akibat perubahan iklim seperti genangan air, banjir, angin, pohon tumbang dan longsor.

Perubahan iklim dapat berdampak signifikan pada operasional kereta api, seperti melengkungnya rel akibat panas ekstrem, banjir yang merusak infrastruktur, dan perubahan pola cuaca yang menghambat perjalanan.

physical and financial implications. Therefore, the Company implements comprehensive climate risk management and strategies to address potential risks.

### Climate Risk Management

The Company conducts integrated climate risk management. As the corporate organ responsible for company management, the Board of Directors has overall responsibility for implementing the Company's risk management system, including climate-related risks. The President Director monitors climate-related risks and opportunities and makes key decisions about mitigation measures.

The Company strives to manage climate-related risks to ensure that they do not negatively affect its operational and financial performance. In this effort, the Company implements programs in line with the guidance of KBUMN. By December 31, 2024, the management of climate-related risks will be overseen by the President Director, with support from the Risk Management Division and Corporate Social Responsibility Subdivision. Below is a description of their respective responsibilities:

### Climate Risk Identification [GRI 201-2]

To address climate-related risks, KAI regularly conducts identification, assessment, and control of climate change risks. According to the 2024 performance evaluation report, there were 88 incidents of train disruptions caused by natural events linked to climate change, including waterlogging, flooding, strong winds, fallen trees, and landslides.

Climate change can significantly impact train operations. For example, extreme heat can cause rail bending, while flooding can damage infrastructure, and shifting weather patterns can hinder travel.

Mitigasi risiko perubahan iklim adalah tindakan untuk mengurangi atau mencegah dampak negatif dari perubahan iklim. Mitigasi Risiko Perubahan Iklim diantaranya:

#### 1. Mengurangi Emisi Gas Rumah Kaca

- Penggunaan energi yang lebih efisien dengan menggunakan energi terbarukan, seperti energi surya atau angin.
- Mengurangi penggunaan kendaraan bermotor melalui penggunaan mobil yang ramah lingkungan atau gunakan teknologi hybrid.
- Mengurangi pemakaian bahan bakar fosil.
- Mengelola sampah dengan menerapkan proses pemisahan sampah, daur ulang, dan mengurangi penggunaan plastik.

#### 2. Meningkatkan Penyerapan Karbon

- Penanaman pohon. Penanaman pohon untuk menyerap karbon dioksida dari atmosfer.
- Penggunaan pupuk organik. Upaya ini dapat membantu meningkatkan kesuburan tanah dan kemampuan menyerap karbon.

#### 3. Mengembangkan Teknologi Baru

- Teknologi penangkapan karbon. Teknologi ini dapat membantu menyerap karbon dioksida dari emisi industri.
- Teknologi energi terbarukan. Teknologi ini dapat membantu mengurangi ketergantungan pada bahan bakar fosil.
- Teknologi pemantauan iklim. Teknologi ini dapat membantu memprediksi perubahan iklim dan dampak-dampaknya.

#### 4. Adaptasi

- Infrastruktur yang tahan terhadap bencana, seperti banjir, kekeringan, dan angin topan.
- Pengembangan Sistem Peringatan Dini. Peringatan dini dapat membantu unit terkait untuk mempersiapkan tim dan fasilitas kerja dalam menghadapi bencana alam.

Selain itu, sebagai bentuk nyata penerapan prinsip ESG, KAI telah menyediakan layanan transportasi berkelanjutan, yang berfokus pada dua aspek, yaitu penerapan prinsip berkelanjutan dan program dekarbonisasi yang terus dijalankan. Upaya ini sejalan dengan visi baru Perseroan, *"Driving Sustainable Transportation, Enhancing People's Lives"*.

Climate change risk mitigation involves actions to reduce or prevent the negative impacts of climate change. Key strategies include:

#### 1. Reducing Greenhouse Gas Emissions

- More efficient energy use by harnessing renewable sources such as solar or wind energy.
- Decreasing reliance on motorized vehicles by promoting environmentally friendly options and hybrid technology.
- Reducing the use of fossil fuels.
- Managing waste effectively through processes like waste separation, recycling, and minimizing plastic use.

#### 2. Increasing Carbon Absorption

- Planting trees to absorb carbon dioxide from the atmosphere.
- Utilizing organic fertilizers to enhance soil fertility and its carbon absorption capacity.

#### 3. Developing New Technology

- Implementing carbon capture technology to absorb carbon dioxide from industrial emissions.
- Advancing renewable energy technologies to lessen dependence on fossil fuels.
- Establishing climate monitoring technologies to predict climate change and its impacts.

#### 4. Adaptation

- Creating disaster-resistant infrastructure designed to withstand floods, droughts, and hurricanes.
- Developing an Early Warning System to prepare relevant teams and facilities for impending natural disasters.

As a tangible example of its commitment to ESG (Environmental, Social, and Governance) principles, KAI has prioritized sustainable transportation services, focusing on two main areas: the application of sustainable practices and an ongoing decarbonization program. This effort aligns with the Company's new vision, *"Driving Sustainable Transportation, Enhancing People's Lives."*

Lebih lanjut, KAI telah melakukan identifikasi risiko dan peluang yang terkait dengan perubahan iklim dengan menggunakan pendekatan TCFD (*Task Force on Climate-related Financial Disclosures*). [GRI 201-2] Melalui metode ini, KAI dapat memahami risiko dan peluang perubahan iklim, serta mengembangkan strategi untuk mengelola dampak perubahan iklim dan memastikan keberlanjutan bisnisnya di masa depan.

Additionally, KAI has identified climate-related risks and opportunities using the TCFD (Task Force on Climate-related Financial Disclosures) approach. [GRI 201-2] Through this method, KAI can understand climate change risks and opportunities, and develop strategies to manage climate change impacts and ensure future business sustainability.

### Identifikasi Risiko Iklim Kepada Pemasok [GRI 201-2]

KAI memahami bahwa perubahan iklim dapat berdampak terhadap kinerja operasional Perseroan, yang kemudian berimbas terhadap kinerja ekonomi Perseroan. Dalam mengatasi tantangan tersebut, Perseroan menetapkan identifikasi risiko iklim pada seluruh rantai pasok dengan merujuk pada kebijakan Peraturan Direksi nomor PER.U/KL. 104/III/2/KA-2024 tentang Pedoman Penerapan Manajemen Risiko terkait kelompok peristiwa Risiko Sosial dan Lingkungan. Terkait dengan pengelolaan pemasok, PT Kereta Api Indonesia (Persero) juga telah memiliki Peraturan Direksi nomor PER.U/KM.101/VII/1/KA-2022 tentang Pedoman Pengadaan Barang dan Jasa. Kebijakan tersebut meliputi peningkatan pengendalian risiko dan implementasi SMK3L. Dengan demikian, para pemasok yang bekerja sama dengan Perseroan wajib mengutamakan prinsip-prinsip SMK3L (Sistem Manajemen Keamanan, Keselamatan, dan Lingkungan), termasuk melakukan mitigasi risiko terkait perubahan iklim sehingga dapat terjaga lingkungan kerja yang aman, sehat, dan ramah lingkungan, yang pada akhirnya dapat meningkatkan nilai tambah bagi Perseroan dan seluruh pemangku kepentingan.

### Climate Risk Identification for Suppliers [GRI 201-2]

KAI understands that climate change may impact the Company's operational performance, which subsequently affects economic performance. To address these challenges, the Company has established climate risk identification across its entire supply chain, guided by the Board of Directors Regulation number PER.U/KL. 104/III/2/KA-2024, which outlines the Guidelines for the Implementation of Risk Management related to Social and Environmental Risk events. In terms of supplier management, PT Kereta Api Indonesia (Persero) has established Board of Directors Regulation number PER.U/KM.101/VII/1/KA-2022, which provides Guidelines for the Procurement of Goods and Services. This policy focuses on enhancing risk control and implementing the SMK3L (Security, Safety, and Environmental Management System). Consequently, suppliers collaborating with the Company are required to prioritize the principles of SMK3L, including the mitigation of climate-related risks. This approach ensures a safe, healthy, and environmentally friendly work environment, ultimately increasing added value to the Company and all its stakeholders.

## Permasalahan Terhadap Penerapan Keuangan Berkelanjutan [OJK E.5]

Selama menjalankan kinerja keberlanjutan KAI dihadapkan dengan berbagai tantangan, sehingga KAI menerapkan upaya-upaya solutif. Berikut adalah sejumlah tantangan yang dihadapi oleh KAI sepanjang tahun 2024:

### 1. Penggunaan Bahan Bakar Minyak (BBM) dalam Jumlah Signifikan Berimplikasi Negatif bagi Ekonomi, Lingkungan, dan Sosial

KAI menyadari bahwa BBM berasal dari sumber daya alam tak terbarukan yang memiliki keterbatasan pasokan. Hal ini dapat menyebabkan terjadinya ketidakseimbangan *supply* dan *demand* BBM di tingkat global maupun nasional, yang pada akhirnya dapat menyebabkan kenaikan harga tiket kereta api. Selain berdampak pada kenaikan harga tiket, konsumsi BBM dapat menyebabkan penurunan kualitas lingkungan.

## Issues in the Implementing Sustainable Finance [OJK E.5]

In executing its sustainability performance, PT KAI has encountered several challenges and implemented corresponding solutions. The following outlines key challenges faced throughout 2024 along with the Company's mitigation strategies:

### 1. Use of Fuel Oil (BBM) in Significant Amounts Has Negative Implications for the Economy, Environment, and Society

PT KAI is aware that fossil fuels (BBM) are derived from non-renewable natural resources with limited supply availability. This situation can create imbalances between fuel supply and demand at both global and national levels, ultimately potentially leading to increases in train ticket prices. In addition to impacting ticket prices, fossil fuel consumption can also contribute to environmental quality degradation.

Untuk menjaga pasokan bahan bakar stabil dan terjamin demi menjaga kenyamanan perjalanan pelanggan, untuk mengoperasikan armada kereta api, KAI menggunakan bahan bakar biodiesel B35 yang terdiri dari minyak solar dan biodiesel (sumber nabati) dengan perbandingan 65:35. Upaya ini dapat menekan dampak buruk terhadap lingkungan karena lebih ramah lingkungan dan ketersediaannya lebih terjamin dibandingkan dengan penggunaan BBM. KAI juga melakukan inisiatif berkelanjutan lainnya, yaitu mengonversikan penggunaan BBM dengan bahan bakar LNG sebagai bahan bakar pembangkit kereta api.

To maintain a stable and guaranteed fuel supply while ensuring passenger travel comfort, PT KAI utilizes B35 biodiesel fuel for its train fleet operations, consisting of a 65:35 blend of diesel and plant-based biodiesel. This initiative helps mitigate negative environmental impacts as it is more environmentally friendly and has more reliable availability compared to conventional fossil fuel usage. Furthermore, KAI is implementing additional sustainable initiatives by converting fossil fuels to Liquefied Natural Gas (LNG) as fuel for train power plants.

## 2. Perubahan Iklim yang Ekstrem

Perubahan iklim berdampak signifikan terhadap kinerja operasional KAI, seperti banjir dan tanah longsor yang dapat menyebabkan gangguan jaringan rel kereta api. Peningkatan suhu yang ekstrem dapat menyebabkan rel melengkung dan memuai, sementara cuaca ekstrem seperti banjir dan longsor dapat merusak jalur rel dan mengganggu operasional kereta api. Untuk mengatasi perubahan iklim, KAI menjalankan program dekarbonisasi, yang berfokus pada transisi ke penggunaan sumber Energi Baru Terbarukan (EBT) yang bebas emisi karbon dalam kegiatan operasional sehingga tidak menghasilkan karbon sama sekali pada proses pembakarannya. KAI telah mengimplementasikan Pembangkit Listrik Tenaga Surya (PLTS) atau Solar Panel pada Gedung Jakarta Railway Center, 53 Stasiun KAI, Balai Yasa Lahat, Balai Yasa Surabaya Gubeng, Balai Yasa Tegal, GK Soka, GK Cipinang, GK Banjar, GK Kertosono, Kantor Daop 2, serta Kantor Divre III. PLTS tersebut dioperasikan melalui sistem *Solar Panel on Grid* yang menggabungkan suplai listrik dari jaringan listrik PLN dan jaringan listrik *Solar Panel* untuk memenuhi kebutuhan listrik di area operasional.

## 2. Extreme Climate Change

Climate change significantly impacts KAI's operational performance, such as floods and landslides that can disrupt railway networks. Extreme temperature increases can cause rails to bend and expand, while extreme weather such as floods and landslides can damage rail lines and disrupt train operations. To address climate change, KAI implements a decarbonization program, focusing on transitioning to Renewable Energy (RE) sources, which is free of carbon emissions in operational activities, ensuring zero carbon emissions during combustion. KAI has deployed Solar Power Plants (PLTS) or Solar Panels at Gambir Station, Jakarta Railway Center, 53 KAI stations, Lahat Railway Workshop, Surabaya Gubeng Railway Workshop, GK Soka, GK Cipinang, GK Banjar, GK Kertosono, Operational Area 2 Office, and Regional Division III Office. These solar power systems operate through an On-Grid Solar Panel system, which integrates electricity supply from PLN's grid and solar panels to meet the power demands of operational areas.

## 3. Tingginya Potensi Terjadinya Risiko Kecelakaan

Aktivitas bisnis KAI di bidang perkeretaapian dihadapkan dengan risiko kecelakaan tinggi karena kereta bergerak dengan kecepatan tinggi dan membutuhkan jarak pengereman yang panjang. Risiko-risiko yang berpotensi terjadi dapat disebabkan oleh faktor internal maupun eksternal, antara lain *human error*, kondisi alam yang sulit diprediksi, keandalan sarana dan prasarana, serta oknum eksternal yang membahayakan sehingga mengganggu jalannya kereta membahayakan, mulai dari pelemparan batu, menyusun batu di rel, hingga tindakan vandalisme lainnya.

## 3. High Potential for Accident Risk

KAI's railway business activities face high risks of accidents due to trains operating at high speeds and requiring long braking distances. Potential risks can arise from both internal and external factors, including human error, unpredictable natural conditions, the reliability of infrastructure and rolling stock, as well as external parties endangering operations through acts such as stone-throwing, placing objects on tracks, and other vandalism.

Sebagai bentuk tindakan preventif untuk meminimalisasi risiko-risiko yang berpotensi terjadi, KAI telah menyusun prosedur pemeriksaan rutin yang wajib dilakukan dalam jangka waktu tertentu untuk mengecek kelaikan prasarana dan sarana. Pemeriksaan rutin dilakukan dengan berjalan kaki mengecek jalur secara detail. KAI juga melakukan *bordes-ride/lok-ride* secara rutin guna memastikan kesiapan dan keandalan sarana dan prasarana untuk menjaga keselamatan perjalanan kereta api.

Dari sisi internal, KAI memperkuat kapabilitas SDM melalui pelaksanaan kompetensi dan disiplin pekerja, mulai dari penyelenggaraan Pendidikan dan Pelatihan (Diklat), Pendidikan Lapangan (Diklap), *Workshop/Forum Group Discussion* (FGD), hingga melakukan sertifikasi SDM Perkeretaapian oleh lembaga yang berwenang. Upaya mitigasi juga dilakukan KAI dengan menghadirkan aplikasi *Safety Railway Information* (SRI). Aplikasi ini memfasilitasi seluruh pekerja untuk dapat melaporkan potensi bahaya terkait keselamatan operasional kereta api, keselamatan kesehatan kerja, dan lingkungan. Melalui aplikasi ini, potensi bahaya dapat dilaporkan oleh pekerja secara cepat, selanjutnya laporan tersebut akan ditindaklanjuti oleh KAI untuk dilakukan pengecekan dan pencegahan kecelakaan.

Dari sisi eksternal, upaya meminimalisasi risiko dengan melakukan edukasi dan sosialisasi keselamatan kepada masyarakat, memetakan daerah-daerah yang rawan bencana alam dan rawan kejadian upaya mencelakakan perjalanan kereta api, serta berkoordinasi dan berkolaborasi dengan *stakeholder* terkait untuk memperketat pengawasan khususnya di area-area yang rawan terjadi pelanggaran.

As a preventive measure to minimize potential risks, KAI has established mandatory periodic inspection procedures to check the operational fitness of infrastructure and rolling stock. These routine inspections involve detailed on-foot track examinations. KAI also conducts regular *bordes-ride/lok-ride* to verify the readiness and reliability of equipment and infrastructure to ensure railway safety.

On the internal aspect, KAI strengthens human resource capabilities through employee competency and discipline programs, including Education and Training (Diklat), Field Training (Diklap), Workshops/Forum Group Discussions (FGD), Certification by authorized railway institutions. KAI also implements mitigation efforts through the Safety Railway Information (SRI) application. This platform enables all employees to report potential hazards related to railway operational safety, occupational health and safety, and environmental concerns. Through this app, workers can quickly report risks, which KAI then follows up with inspections and preventive measures.

On the external aspect, KAI minimizes risks by conducting public safety education and awareness campaigns, mapping areas prone to natural disasters and railway sabotage attempts, and coordinating and collaborating with relevant stakeholders to strengthen surveillance, particularly in high-risk violation areas.

**Implikasi Finansial, Risiko, serta Peluang Akibat Perubahan Iklim [GRI 3-3, 201-2]**

Perubahan iklim yang ditandai dengan anomali cuaca seperti perubahan intensitas dan pola curah hujan, kenaikan suhu udara, kekeringan, dan banjir. Salah satu fenomena iklim yang signifikan adalah El Nino Southern Oscillation (ENSO), yang menyebabkan pergeseran musim hujan. [GRI 3-3] Hal ini dapat mengakibatkan kekeringan atau banjir yang berdampak buruk pada sektor usaha, termasuk KAI. Perseroan memahami bahwa perubahan iklim telah memberikan dampak tidak langsung terhadap aktivitas operasi KAI, yang pada akhirnya dapat berdampak terhadap finansial Perseroan.

Menyikapi dampak yang berpotensi terjadi akibat perubahan iklim, KAI melakukan identifikasi terhadap bahaya, penilaian, dan pengendalian risiko bencana lingkungan secara berkala. Sepanjang 2024, terdapat 88 kejadian gangguan perjalanan kereta api yang diakibatkan oleh kejadian alam akibat perubahan iklim seperti genangan air, banjir, dan tanah longsor.

KAI juga telah melakukan identifikasi risiko dan peluang yang terkait dengan perubahan iklim melalui pendekatan TCFD (*Task Force on Climate-related Financial Disclosures*). Melalui pendekatan TCFD, Perseroan dapat memahami risiko dan peluang perubahan iklim. KAI mengembangkan strategi untuk mengelola dampak perubahan iklim dan memastikan keberlanjutan bisnisnya di masa depan, seperti dijelaskan pada bagian Tata Kelola Keberlanjutan dalam laporan ini. Kendati demikian, pada 2024 KAI belum mengidentifikasi dan mengalokasikan biaya untuk pengelolaan risiko dan peluang terkait perubahan iklim secara terpisah. Saat ini KAI sedang mencari metode terbaik untuk melakukan identifikasi implikasi finansial tersebut dan diharapkan informasi dapat disampaikan pada pelaporan tahun 2027.

**Financial Implications, Risks, and Opportunities Arising from Climate Change [GRI 3-3, 201-2]**

Climate change, characterized by weather anomalies such as shifts in rainfall intensity and patterns, rising temperatures, droughts, and floods, poses significant challenges. One notable climate phenomenon is the El Niño Southern Oscillation (ENSO), which alters the rainy season. [GRI 3-3] These changes can lead to droughts or floods, adversely affecting various industries, including KAI. The Company recognizes that climate change has indirectly impacted its operational activities, which may ultimately influence its financial performance.

In response to potential climate-related risks, PT KAI conducts periodic identification, assessment, and mitigation of environmental disaster risks. Throughout 2024, there were 88 instances of train service disruptions caused by climate-induced natural events, including waterlogging, floods, and landslides.

Additionally, PT KAI has identified climate-related risks and opportunities using the Task Force on Climate-related Financial Disclosures (TCFD) framework. This approach enables the Company to better understand climate risks and opportunities and develop strategies to mitigate climate impacts while ensuring long-term business sustainability, as outlined in the Sustainability Governance section of this report. However, in 2024, PT KAI had not yet separately identified or allocated specific costs for managing climate-related risks and opportunities. KAI is currently exploring the best method for identifying these financial implications and expects to provide this information in its 2027 report.

### Nilai Ekonomi yang Dihasilkan dan Didistribusikan [GRI 2-27, 3-3, 201-1, 201-4]

Keberlanjutan usaha jangka panjang bergantung dari kinerja ekonomi yang dihasilkan dan didistribusikan. Pencapaian kinerja ekonomi yang positif dapat mendorong peningkatan investasi dalam infrastruktur, teknologi, dan sumber daya manusia hingga mendorong kemajuan ekonomi dan mobilitas masyarakat. Perseroan berkomitmen untuk mencapai kinerja ekonomi yang solid melalui strategi bisnis yang efektif, manajemen risiko yang baik, dan investasi dalam inovasi dan infrastruktur.

Perseroan menghitung nilai ekonomi langsung, nilai ekonomi yang didistribusikan, dan nilai ekonomi yang ditahan. Nilai ekonomi langsung yang dihasilkan KAI terdiri atas beberapa komponen pendapatan KAI, yaitu pendapatan angkutan penumpang, angkutan barang, angkutan pendukung angkutan KA, pendapatan non-angkutan, serta kompensasi pemerintah. Adapun kompensasi yang diberikan pemerintah sebesar Rp8,29 triliun yang berupa Pendapatan Pelayanan Publik (PSO), Pemeliharaan Infrastruktur, dan Angkutan Perintis. Kompensasi tersebut mencerminkan kepercayaan publik dan dukungan pemerintah untuk KAI. [GRI 201-4]

Sementara nilai ekonomi yang didistribusikan merupakan pengeluaran yang didistribusikan sebagai bentuk kontribusi Perseroan dalam meningkatkan laju pertumbuhan ekonomi dan kesejahteraan para pemangku kepentingan, seperti biaya operasional, pembayaran pajak, penggunaan prasarana, remunerasi pekerja, dan pembayaran kepada pemasok, serta realisasi dana untuk masyarakat yang diwujudkan dalam bentuk Tanggung Jawab Sosial dan Lingkungan (TJSL). Sedangkan nilai ekonomi yang ditahan adalah selisih antara nilai ekonomi yang dihasilkan dikurangi dengan nilai ekonomi yang didistribusikan, yang digunakan untuk pengembangan usaha Perseroan. Distribusi perolehan nilai ekonomi Perseroan pada tahun 2024 secara terperinci diuraikan pada tabel berikut: [GRI 201-1]

### Economic Value Generated and Distributed [GRI 2-27, 3-3, 201-1, 201-4]

Long-term business sustainability depends on the economic value generated and distributed. Positive economic performance enables increased investment in infrastructure, technology, and human capital, ultimately driving economic progress and community mobility. The Company is committed to achieving solid economic performance through effective business strategies, sound risk management, and investments in innovation and infrastructure.

The Company calculates direct economic value, distributed economic value, and retained economic value. The direct economic value generated by KAI consists of several revenue components, namely passenger transportation revenue, freight transportation revenue, railway support transportation revenue, non-transportation revenue, and government compensation. The government's compensation amounted to Rp8.29 trillion, consisting of Public Service Revenue (PSO), Infrastructure Maintenance, and Pioneer Transportation. This compensation reflects public trust and government support for KAI. [GRI 201-4]

Meanwhile, distributed economic value represents expenditures distributed as a form of the Company's contribution to increasing economic growth and stakeholder welfare, such as operational costs, tax payments, infrastructure use, employee remuneration, and payments to suppliers, as well as the realization of funds for the community in the form of Social and Environmental Responsibility (CSR). Retained economic value, the difference between generated economic value minus distributed economic value, is used for the Company's business development. The detailed distribution of the Company's economic value acquisition in 2024 is outlined in the following table: [GRI 201-1]

## ASPEK MATERIAL

### Penggunaan Material yang Ramah Lingkungan [OJK F.5]

Sejak tahun 2018, KAI telah menerapkan komitmen untuk mendukung program pemerintah dalam mengurangi sampah plastik, yang diwujudkan dengan penggunaan kemasan ramah lingkungan pada 100% produk makanan dan minuman yang dijual dalam perjalanan kereta api. Kemasan ramah lingkungan tersebut menggunakan material kertas, serat jagung, dan serat tebu. Bahan organik alami tersebut selain aman untuk makanan juga mudah terurai. Penggunaan kemasan tersebut diharapkan mampu berperan secara signifikan sebagai upaya meminimalisasi penggunaan plastik. Selain itu KAI juga mengeluarkan Surat Edaran Pembatasan Penggunaan Plastik Sekali Pakai dan Bahan Yang Sulit Terurai Nomor SE.U/KL.403/VIII/2/KA-2024. Hal ini untuk meningkatkan kesadaran pekerja untuk mengurangi dampak negatif penggunaan plastik sekali pakai dan bahan yang sulit terurai terhadap lingkungan dalam upaya mewujudkan lingkungan yang bersih dan sehat serta berkelanjutan. [GRI 301-1, 301-2, 301-3]

Pada tahun 2024, KAI turut serta mendukung lingkungan berkelanjutan dengan melakukan pengurangan penggunaan kertas *boarding pass* melalui *Face Recognition Boarding Gate* dan *e-boarding* pada Access by KAI. Penerapan *Face Recognition Boarding Gate* juga berpengaruh terhadap

### Use of Environmentally Friendly Materials [OJK F.5]

Since 2018, KAI has implemented a commitment to support government programs to reduce plastic waste, which is realized by using environmentally friendly packaging on 100% of food and beverage products sold on train trips. This environmentally friendly packaging uses paper, corn fiber and sugar cane fiber. Apart from being safe for food, this natural organic material is also easily decomposed. The use of this packaging is expected to play a significant role in efforts to minimize the use of plastic. Additionally, the Company has issued Circular Letter No. SE.U/KL.403/VIII/2/KA-2024 on the Restriction of Single-Use Plastics and Non-Biodegradable Materials. This initiative aims to raise employee awareness about reducing the environmental impact of single-use plastics and non-biodegradable materials, supporting efforts to create a clean, healthy, and sustainable environment. [GRI 301-1, 301-2, 301-3]

In 2024, KAI participated in supporting a sustainable environment by reducing the use of paper boarding passes through the Face Recognition Boarding Gate and e-boarding at Access by KAI. The implementation of the Face Recognition Boarding Gate also has an impact on the efficiency of paper

efisiensi biaya pembelian kertas di sepanjang tahun 2024. Hingga 31 Desember 2024, KAI mencatat penggunaan kertas sebesar 78.890 rol, menurun 6,41% atau setara dengan 5.410 rol dibandingkan dengan tahun lalu sebesar 84.300 rol.

## ASPEK ENERGI

### Jumlah dan Intensitas Energi yang Digunakan [OJK F.6] [GRI 302-1, 302-2]

KAI telah melakukan penghitungan terhadap jumlah energi terbarukan berupa listrik yang berasal dari tenaga surya dan energi tak terbarukan yang berupa listrik dari Perusahaan Listrik Negara (PLN), Bensin, dan Biosolar B35. Penghitungan yang ditampilkan sudah mencakup masing-masing unit kerja pada wilayah operasional, dengan hasil sebagai berikut:

purchasing costs throughout 2024. As of December 31, 2024, KAI recorded paper usage of 78,890 rolls, a decrease of 6.41% or equivalent to 5,410 rolls compared to the previous year at 84,300 rolls.

Perhitungan rasio intensitas energi menggunakan konsumsi energi dalam organisasi (KAI) [GRI 302-3] / The energy intensity ratio is calculated using energy consumption within the organization (KAI). [GRI 302-3]

Pada tahun 2024, KAI berhasil menunjukkan adanya penurunan intensitas pemakaian energi yang digunakan untuk aktivitas operasional Perusahaan. Intensitas pemakaian energi tercatat sebesar 0,328 GJ/Rp Miliar, menurun 1,50% dibandingkan dengan intensitas pemakaian energi tahun sebelumnya sebesar 0,333 GJ/Rp Miliar. KAI juga memastikan bahwa data konsumsi energi sepanjang tahun 2024 telah dihitung oleh internal Perusahaan dengan menggunakan metode yang relevan dan dapat dipertanggungjawabkan.

In 2024, KAI successfully demonstrated a reduction in the intensity of energy consumption used for the Company's operational activities. The energy usage intensity was recorded at 0.328 GJ/Rp billion, which decreased by 1.50% compared to the previous year's energy usage intensity of 0.333 GJ/Rp billion. KAI also ensured that energy consumption data throughout 2024 was calculated internally using relevant and accountable methods.

Terkait konsumsi energi di luar organisasi, KAI belum melakukan penghitungan. Namun KAI secara konsisten melakukan komunikasi kepada para mitra kerja untuk melakukan pencatatan energi sebagai upaya nyata atas pelaksanaan inisiatif-inisiatif pengurangan konsumsi energi. Saat ini, KAI sedang menyusun mekanisme pelaporan konsumsi energi dari mitra kerja melalui integrasi dalam sistem monitoring lingkungan yang ditargetkan dapat mulai berjalan secara bertahap pada tahun 2026. Dengan demikian, penyajian informasi mengenai konsumsi energi di luar organisasi direncanakan dapat dilakukan pada laporan keberlanjutan periode tahun buku 2026. [GRI 302-2]

Regarding energy consumption outside the organization, KAI has not yet conducted calculations. However, KAI consistently communicates with its partners to record energy consumption as a concrete effort to implement energy reduction initiatives. KAI is currently developing a mechanism for reporting energy consumption from its partners through integration into an environmental monitoring system, targeted to begin operating gradually in 2026. Thus, the presentation of information on energy consumption outside the organization is planned to be carried out in the sustainability report for the 2026 fiscal year. [GRI 302-2]

**Kebijakan Penggunaan Energi Baru Terbarukan dan Implementasinya**

**New and Renewable Energy Policy and Its Implementation**

KAI menerapkan kebijakan dalam penggunaan energi baru terbarukan dalam aktivitas operasi Perusahaan sebagai wujud kontribusi bagi pemenuhan tujuan-tujuan pembangunan berkelanjutan (Sustainable Development Goals/SDGs).

KAI has implemented a renewable energy policy in its operational activities as part of its commitment to achieving the Sustainable Development Goals (SDGs). This policy is governed by the Health, Safety, Security, and Environment

Kebijakan tersebut diatur dalam Kebijakan *Health, Safety, Security, and Environment* (HSSE) Nomor: KS.102/XII/1/KA-2022 dan Kebijakan Keberlanjutan Nomor:KL.504/IX/13/KA-2024, yang secara khusus menyatakan tujuan KAI dalam mengadaptasi perubahan iklim dengan ikut berkontribusi menurunkan emisi karbon antara lain melalui penerapan penggunaan energi baru terbarukan dalam aspek lingkungan.

Untuk mendukung pelaksanaan Kebijakan HSSE dan Kebijakan Keberlanjutan berjalan optimal, sepanjang tahun 2024 KAI telah mensosialisasikan kepada seluruh wilayah operasional KAI baik secara digital (melalui *Rail Document System* maupun *E-Office*), maupun sosialisasi secara langsung kepada jajaran Daop, Divre, dan Anak Perusahaan yang dipasang pada Kantor, Stasiun, serta Unit Pelayanan Teknis lainnya. Kebijakan HSSE dan Kebijakan Keberlanjutan diwujudkan dalam bentuk sejumlah kegiatan, antara lain penggunaan bahan bakar B35, pemasangan panel surya di sejumlah stasiun, serta penggunaan kendaraan berbasis listrik pada aktivitas operasional.

Untuk pelaporan konsumsi energi di luar organisasi, per 31 Desember 2024 KAI belum melakukannya. Hal ini disebabkan belum terdapatnya data yang cukup untuk dilakukan pelaporan penghitungan energi di luar organisasi. KAI berkomitmen untuk terus meningkatkan kualitas pendataan mengenai konsumsi di luar organisasi Perseroan melalui komunikasi dengan berbagai pihak terkait. **[GRI 302-2, 302-4]**

#### Upaya dan Pencapaian Efisiensi Energi dan Penggunaan Energi Terbarukan [OJK F.7] [GRI 3-3, 302-4, 302-5]

KAI melakukan upaya pencapaian efisiensi energi dengan cara penghematan listrik sebagai langkah mengurangi dampak lingkungan dari aktivitas Perusahaan sekaligus mendukung program Pemerintah mewujudkan *net zero emission* pada tahun 2060. Pada tahun 2024 penggunaan listrik KAI secara keseluruhan mengalami penurunan dibandingkan tahun 2023. KAI terus menjalankan komitmennya dalam meningkatkan efisiensi energi melalui penggunaan teknologi hemat energi dan praktik operasional yang berkelanjutan serta penerapan inovasi berupa penggunaan energi terbarukan, yaitu tenaga surya untuk memenuhi kebutuhan listrik.

(HSSE) Policy No. KS.102/XII/1/KA-2022 and the Sustainability Policy No. KL.504/IX/13/KA-2024, which specifically outline KAI's objectives in climate change adaptation by contributing to carbon emission reduction. This includes, among other measures, the implementation of renewable energy initiatives within environmental aspects.

To ensure effective implementation of the HSSE and Sustainability Policies, throughout 2024, KAI has conducted comprehensive dissemination programs across all KAI operational areas. These awareness campaigns have been delivered through both digital channels (via the Rail Document System and E-Office platforms) and in-person sessions for Operational Area, Regional Division, and Subsidiary personnel, with policy materials displayed at the office, stations, and other technical service units. The HSSE and Sustainability Policies have been operationalized through various initiatives, including the implementation of B35 biofuel, the installation of solar panels at multiple stations, and the deployment of electric vehicles for operational activities.

As of December 31, 2024, KAI has not reported on energy consumption outside the organization. This is due to the lack of sufficient data to report on energy calculations outside the organization. KAI is committed to continuously improving the quality of data collection on the Company's external consumption through communication with various relevant parties. **[GRI 302-2, 302-4]**

#### Energy Efficiency Efforts and Renewable Energy Adoption [OJK F.7] [GRI 3-3, 302-4, 302-5]

KAI is actively pursuing energy efficiency through electricity conservation measures, which serve to reduce both the Company's environmental footprint while supporting the Government's net zero emission targets by 2060. In 2024, electricity consumption at KAI's headquarters increased compared to 2023 levels. The Company maintains its commitment to improving energy efficiency by implementing energy-saving technologies, adopting sustainable operational practices, and introducing renewable energy solutions, particularly solar power generation to meet electricity demands.
